## Software

A description of the submitted software is listed below.

### 1. System Name:

Sportuno

Sportuno is a sweepstakes game where players are provided with equal amounts of virtual credit to bet and trade on sports events. Tournaments are limited by time and the designated markets that can be played. The objective of the game is to successfully bet and trade on the available markets across the allotted time period; the winning players will be those with the largest virtual bankroll at the time the Tournament closes. Winners will be paid according to the rules of the individual Tournament through a pre-configured payable.

Sportuno can either be integrated with an operators existing Player Account Management system, or be deployed with its own Player Account Management system.

The odds for Sportuno Tournaments are sourced via live feeds from Sportuno's odds providers and may not accord exactly with those available in the operator's sports-book. However, all players will be subject to the same odds within each Tournament making game play fair to all.

So, in essence, Sportuno offers standard sports betting functionality, but wrapped within a tournament model. The sports betting functionality match that exactly of industry standard sports betting engines; consumption of real time feeds; presentation of sports betting information; bet placement; cash-out; resulting; settling; etc.

Sportuno verifies all individual sports result data directly after an event and before finalising each Tournament. Sportuno's declared result for both sporting events within a Tournament and each Tournament itself is official and will only be changed in the event of an obvious error.

## Software

For version-control of the software, GLI gathered the following software:

Description	File/Directory Name
External Feed Integration	feed
SHA-256	4b72583490c8202ac2b4de167b2ec6d7ab829b09842863d64b98f2d3b159dd30

## Notes

GLI's Evaluation of the software included (but was not necessarily limited to) the following elements to the extent necessary to evaluate the software for compliance with the requirements in the aforementioned Technical Standards:

- Submitted Documentation Review
- Source Code Review
- Game Accounting
- Jurisdictional Requirements Verification
- Game Error/Event Handling
- Functionality Testing
- Artwork and Interface Testing

GLI's Uniform Scope of Work assessment of the software was related only to the technical scope of work elements discussed herein. This specifically excludes any other features or functions provided by the submission not related to the Gaming System or Business Functions.

Please note that the system supports customizable configurations of wagering events that may be entered manually by the operator, or, may be received automatically through a data feed. GLI has confirmed that the system supports compliant configurations, but it is the Operator's responsibility to ensure that all wagering events and their associated markets are properly configured and accurately reflect any information advertised to the customers in the House Rules. These configurations should be verified prior to the offering of a wager on the software.

All information provided by the supplier, including internal control procedures and technical documents, is assumed to be accurate and complete.

## Verification Procedures

Please contact the Software Supplier for assistance with Docker Image Verification procedures. Verification must be performed directly on the Linux-based server where the sportsbook software has been installed. This requires root access to the server and knowledge of the Docker node locations for each critical file.

## Test Environment

The software was tested in an environment consisting of the following components:

Client Side Details	
Delivery Mechanism(s)	Desktop Web-based
Client Installer Package(s)	N/A
Delivery Mechanism Type(s)	HTML5
